

# CLARIFY

## A BIOLOGICAL PRODUCT FOR POND CLARIFICATION

### Benefits

- ◆ Economical remediation compared to draining and rehabilitation
- ◆ Reduces odors and unsightly scum
- ◆ Maintenance dosage prevents recurrence of bottom sediments
- ◆ Establishes a biological equilibrium to maintain pond health
- ◆ Degrades residual organic soils that help support insects and other unwanted pests

### Description

Surface water run-off from agricultural and ornamental lands that have been heavily fertilized is a major cause of water quality deterioration in ponds and small lakes. Excess nutrients can cause algae blooms of the lagoon. Decomposition of these sediments is slow due to organic acids, and low oxygen levels.

Eventually, sediments build up to a point where the surface water becomes turbid. Turbidity reduces sunlight penetration, which disrupts normal photosynthetic processes, which fewer lowers daytime oxygen levels.

**CLARIFY** is a revolutionary new product that supplies a consortium of active microorganisms combined with a buffering and clarification aid.

**CLARIFY** when applied at the recommended dosages, reduces pond turbidity and inoculates bottom sediments with microorganisms for biological oxidation of the organic deposits. Eventually, an equilibrium is established, and the pond can be returned to its original state.

## Characteristics

Bacteria Specification.....	5 billion/gram
pH.....	4.0-11.0
Appearance .....	Tan powder
Fragrance.....	Natural
Stability.....	2 year at 35 <sup>o</sup> to 95 <sup>o</sup> F
Temperature Range.....	45-120 <sup>o</sup> F

## Storage and Handling

Store in a cool dark place. Wash hands thoroughly with warm, soapy water after contact. Avoid eye and skin contact.

## Packaging

**Packaged in:** 25 pound containers  
Also available in 8 ounce, Bio-Pouches

**brighton industries inc.**
